HCI Survey Evaluation Results for 2019 Spring

Alexander Stoytchev,

In the attachment you will find the evaluation results of the survey HCI 575 XW (S2019) [Alexander Stoytchev].

If you have questions or comments contact your Class Climate HCI Administrator or email course-evaluation@iastate.edu

- ISU HCI Online Course Evaluation Administrator

1.7) The textbook(s) and readings used in this course are

1.8) Rate the usefulness of the **outside** assignments (homework, writings, reports, special projects, etc.) in helping you learn

1.9) Rate the usefulness of the **in-class** activities (lectures, discussions, etc.) in helping you learn

1.10) On average, how many hours per week have you spent on this class, including attending classes, doing readings, reviewing notes, writing papers and any other course related work?

1.11) From the total average hours above, how many do you consider were valuable in advancing your education?

1.12) The difficulty level of this course is

2. Student

2.1) My grade point average is:

2.2) I expect a final course grade of:

2.3) In my program this course is:

2.4) My class is:

2.5) My major is in the area of:

2.6) My sex is:

3. Comments

3.1) What did you like best about this class?

- A lot of interesting material and challenges you intellectually. Great class overall and lot of work. TA was super knowledgeable in the material and helped understand concepts easier combined with lectures.
- Much of the content was very interesting and the professor seems very knowledgeable/interested in the topics.
- The instructor has a great way of teaching difficult subjects such as complex numbers and Fourier transforms, well beyond what I've experienced in past course work. Dr. Stoytchev's use of visualization to "bring these topics to life" adds a completely new dimension that I'd previously not grasped. I've seen much of this material before, a long time ago (I'm a non-traditional distance student; I'm approaching retirement), but I've never felt like I understood some of these topics with this clarity.
- The material covered was very interesting. Computational perception is already everywhere in our daily lives and I can see being able to use this knowledge in my future professional work.
- The material is very interesting and some of it is well explained. TA's are very helpful.

3.2) What did you like least about this class?

- The homework and readings took a lot of time but were still very useful.
- The homework took much longer than I anticipated. We did not receive feedback on our assignments in terms of grades so I have no idea how I am doing in the class and what grade I may end up with in the class. Also, there seemed to be a lot of math review which is okay, but I think way too many lectures were focused on this math review such as FFT. I wish he would spend more time on how this math and other algorithms work when being used in computational perception.
- This class is not well organized. Canvas course not organized. An excessive amount of assignments.
- Timeline is a bit unrealistic considering the difficulty of the material and the amount of reading necessary to understand and complete all

the homeworks.

Assignments were never graded. It would be nice to have an idea where we stand in the class throughout the semester by getting some sort of feedback on homeworks and project ideas.

- Towards the end of the semester the lectures turned away from the core topics of "computational perception", moving towards theoretical (and even philosophical) discussion of how the Human brain works. I enjoyed these lectures. However, I was still struggling at times with homework and project work, and I think at least a portion of these lectures could have been spent fielding student questions about the assignments (unless I'm the only one that's feeling "behind the curve").

3.3) Please add any additional comments.

- 1. The class is over in one week and we do not know even a single grade. Professor told us that we are welcome to drop, but how would I know if I need to drop without knowing my grade? There is no feedback on the assignment.
 - 2. There is a lot of reading material and none of them are free. Even the paid readings are hard to find and buy. We would benefit from having all the readings sold as a package.
 - 3. The recorded lectures on Canvas had bad audio and video to a point that it was almost impossible to hear on a few lectures. If the class has damaged audio and video equipment, why not change the class? Why do we pay high fees for bad quality?
 - 4. We always have to remind the professor about many different things. For example, online students need a discussion opened to find team partners, etc. This relates to bad organization.
 - 5. It's OK if the class is difficult, not everything should be easy. However, there should be some consideration given to diminished law of return.
 - Dr. Stoytchev and his assistants Vlad Sukhoy and Ben Simon did a great job answering my technical questions and shepherding me through some of the homework and project assignments. A special shout-out to Vlad for being the most responsive - I'm not sure I would have completed some of the assignments without his help.
- Also, while I am retiring soon, I'm not "done". I've already begun teaching Computer Science at a small private university where I live. I've tried creating lectures and homework assignments designed to guide students through a learning "progression". I think I've had some limited success. However, I was introduced to a model in this course that sets the bar a lot higher than I've been able to achieve on my own. I hope to adapt much of what I experienced this semester into my future course designs.
- The audio for the online course is TERRIBLE. Any device I listen on, I have to turn the volume all the way up to just barely hear the professor speak. The worst part is there is a high pitch sound that is constantly going and it is about the same volume as the professors voice so when I turn the audio all the way up to hear the professor, I hear this constant high pitch whine along with the professors voice which is very annoying and I believe is the cause of damage to a set of speakers I would normally listen to lectures on.
 - This is an excellent course and I would highly recommend it to anyone to has any interest in computational perception.
